¹ In the dimensional table, standard shaft length and maximum shaft length are values for rolled shafts (T).
² The dynamic permissible thrust (F) indicates the torque at which the contact surface pressure on the screw tooth surface is 9.8 N/mm². The maximum axial load (both when stopped and during operation) is set to the dynamic permissible thrust or below, and it must be selected while taking into consideration the safety factors of Table1 on **■16-5**.
³ The static permissible load (P) of the flange indicates the strength of the flange against the load as shown in the figure on the right.
Note: Cut shafts (K) are made to order. For maximum shaft lengths of cut shafts (K), contact THK.
